                                         The present sequence is that of one the four isoforms of Api m 6, designated Api m 6.01. The sequence represents the central amino acid sequence shared by all four isoforms (see ABB08313, ABB0832 and ABB08313). The specification describes a substantially pure polypeptide, Api m 6, derived from bee venom and found in four isoforms. The proteins of the invention have immunosuppressant activity and may form the basis of a vaccine. Api m 6 is useful for modulating an immune response. I.e. as an allergen for immunotherapy. The protein is useful for identifying an individual at risk for bee venom hypersensitivity. The method comprises administering Api m 6 to the individual and measuring an immune response raised, where a detectable immune response indicates that the individual is at risk for bee venom hypersensitivity. Antibodies specific

```
The present sequence represents a nematode extracted anticoagulant protein (MAP). The protein contains at least one NAP domain which has selective inhibitory activity as an anticoagulant and/or serine protease inhibitory activity for factor VIIa/TF. The specification has selective inhibitory activity for factor VIIa/TF. The specification for factor VIIa/TF selective inhibitory activity. The method comprises determining the time to clotting effected by a concentration of the isolated protein in an ex vivo profirombin time (PT) assay and an ex vivo prolongation of clotting effected by the isolated protein in each of the pT and appraisable the pT and appraisabl
                                                                                                                                                                                                                                                                                                                                                   a doubling of clotting time is deemed a two-fold elevation; and calculating a PT to aPTT prolongation ratio, where a ratio at least one is indicative of factor VIIa/TF inhibitory activity. The method is useful for determining if a protein has factor VIIa/TF inhibitory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19; Indels 10; Gaps

The present sequence is the Necator americanus nematode-extracted anticoagulant protein NamNAP. Proteins of this kind have been shown to be effective at preventing blood clotting without causing excessive bleeding. The protein can be used in blood collection tubes to aid the isolation of plasma from the blood, to prevent thrombosis which may be linked to the rupture of an atherosclerotic plaque, acute myocardial infarction, angina, thrombolytic therapy, percutaneous transluminal coronary angioplasty, disseminated intravascular coagulopathy, infection, instance, the antibodies can be raised in order to detect infection by nematodes (the coding sequence can also be used for this) or as diagnostic tests. The protein can also be used as a vaccine against
                                                                                                                                                                                                                                                                                Gaps

```

ŏ ద The present sequence represents a nematode extracted anticoagulant protein (NAP). The protein has activity as an anticoagulant and/or serine protease inhibitor. The protein contains at least one NAP domain which has selective inhibitory activity for factor VIIa/TF. The specification describes a method for screening an isolated protein at least one domain

Screening an isolated protein for Nematode-extracted Anticoagulant Protein domains

WPI; 1999-539569/45.

Disclosure; Columns 143-144; 197pp; English.

```
determining the time to clotting effected by a concentration of the isolated protein in an ex vivo prothrombin time (PT) assay and an ex vivo prothrombin time (PT) assay and an ex vivo prothrombin time (PT) assay and an ex vivo protongation of clotting effected by the isolated protein in each of the PT and aPTT assay, with respect to a baseline clotting value for each assay, where protongation of clotting is calculated as fold elevation of clotting time relative to a baseline clotting value, where a doubling of clotting time relative to a baseline oldting value, where a calculating a PT to aPTT prolongation ratio, where a ratio at least one is indicative of factor VIIa/TF inhibitory activity. The method is useful for determining if a protein has factor VIIa/TF inhibitory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        an aqueous medium containing at least one dissolved or suspended metal. The transgenic algae are used for the selective separation of metals, particularly the separation of precious and desirable metals such as gold and uranium, from other metals such as cadnium, zinc and copper. The method can be used to facilitate the selective recovery of precious and rare metals from mineral sources where aqueous media can be used, such as in natural surface water flows, ground water and where water may be introduced. The method is suitable for well-drilling, soil and water remediation arts, mining fields, and industrial engineering. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genus Chlamydomonas comprising reproductive genetic material comprising a nucleotide sequence capable of expressing chicken type I Metallothionein. Also described is a method of removing metal from .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                designated ORF (open reading frame) 1-453, and sequences ABN75054-
ABN79587 represent cDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively) referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polynucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX polynucleotides, and activity, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopolesis regulation,

tissue growth, angiogenesis, activin or inhibin activity, chemotactic/
chemokinetic activity, haemostatic activity, thrombolytic activity,
receptor/ligand, antiinflammatory activity, thrombolytic activity,
cand antiinfective activity, and may also be involved in the determination
of bodily characteristics, fertility and behaviour. ORFX proteins,
concleid acids and antibodies may be used in the treatment of cancers,
corpus transplantation as polities and Alzheimer's disease,
cardiovascular diseases, immune system disorders related to
corpus transplantation, disorders of tissue growth and regeneration,
diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester
corpus transplantation, disorders of tissue growth and regeneration,
diseases such as diabetes mellitus, hypothyroidism, and cholesterial,
corpus transplantation diseases caused by viral, bacterial,
cingal and other pathogens. ORFX uncleic acids may also be used as a
source of primers and probes, in the detection of ORFX genomic sequences
corpus or transcripts, in the identification and cloning of homologous
corpus research of diagnosis, and in forensic biology. The ORFX
nucleic acids may additionally be used to produce transgenic animals
content and undersate specific antibodies, which are useful in the
immunogens to generate specific antibodies, which are useful in the
corpus diagnosis, treatment and monitoring of ORFX-associated diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A recombinant streptavidin-metallothionein chimeric protein is useful to add or remove heavy metal ions into biotin-containing biological material, particularly for tumour imaging, radiotherapy, and DNA or protein labeling
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                            δλ
                                                                                                                                                                                chimeric protein. This protein is produced by introducing into a host cell nucleic acid encoding a bifunctional fusion protein having a streptavidin and a metallothionein moiety, and incubating the cell to express the fusion protein. The streptavidin moiety consists of residues 16-133 of mature streptavidin. The chimeric protein is used to incorporate heavy metal ions into biological materials containing biotin, or to remove heavy metal lons from the biological material. Specific uses include loading cancerous tissue with heavy metal ions for imaging of tumour cells and radiotherapy, and labeling DNA and proteins for detection on gels or blots by surface scanning mass spectrometry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polynucleotide encoding a polypeptide which is related to potato snakin antimicrobial protein and GASA4 or GASA5 to GASTI homologues, which is referred to as lysine- and cysteine- rich peptides (KCP)-like polypeptide, having a nucleotide sequence from 36 sequences of defined base pairs, given in the specification. A recombinant expression cassette comprising the isolated polynucleotide of the invention is useful for modulating the level of (KCP)-like polypeptides in a plant cell, where the level of (KCP)-like polypeptides is increased, and disease resistance is enhanced. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antimicrobial; transgenic; plant; potato snakin antimicrobial protein; GASA4; GASA5; GAST1 homologue; lysine- and cysteine- rich peptide; KCP-like polypeptide; modulating; disease resistance.
                                                                                                                     used to produce chimeric proteins of the invention. The specification describes a recombinant bifunctional streptavidin-metallothionein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                can independently exert effects on hirs man in instruct, uner with AES' acting to stabilise herx mRNA, and AB3' acting to increase herx mRNA levels, over time. AES' also directs liver-specific expression. The hPC gene age-related regulatory sequence is found in the 5' UTR (AAF54081), and contains two PEA-3 (polyoma virus activator 3) elements 5'.GAGGAAA-3' and 5'-CAGGAAG-3'. The age-related regulatory sequences of the invention, along with their homologues, variants and fragments, may be used in the construction of recombinant expression vectors for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expression in an age-related manner and/or in a liver-specific manner. The invention identifies regions of the human factor IX (hFIX) gene, and a region of the human protein C (hFO) gene, which are age-related regulatory sequences. The hFIX age-related regulatory sequences are designated AES' (AAF$4016) and AE3' (AAF$4017) and are found in the 5' UTR (at position 2164-2165 of AAF$4018) and 3' UTR (at position 2164-2185 of AAF$4018) respectively. These elements act synergistically to increase hFIX levels over the lifespan of an individual; however, they
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expression of a desired sequence in an age-related fashion in a host cell. Preferred target genes for expression in such age-regulatable expression vectors include those encoding proteins involved in blood coaqulation (e.g., the pro-coagulants factor IX and factor VIII, and the
sequence represents a protein relating to the KCP-like proteins of the

5;
                                                                                                                          liver-specific expression of target genes. Age-regulatable constructs may be used in the treatment of such age-related conditions such as thrombosis, cardiovascular disease, diabetes, Alzheimer's disease, Parkinson's disease, cancer, osteoporosis, osteoarthritis and dementia. Specifically, they may be used to express factor IX antisense mRNA in the treatment of thrombotic conditions associated with the natural
anti-coagulants protein C and antithrombin III), human alpha-1-antitrypsin, PEA-3 protein and reporter proteins such as luciferase. Preferred promoters for use in such age-regulatable expression vectors include the human factor IX promoter, the T7 promoter, the T3 promoter and the SP6 promoter. The expression vectors of the invention may be used in gene therapy to provide age-related and/or
                                                                                                                                                                                                                                                    age-related rise in factor IX expression. Transgenic cells or animals that contain vectors of the invention are useful as models of these diseases, in screening for potential therapeutic agents and for studying normal processes such as ageing and gene expression. Fragments and homologues of age-related regulatory sequences, are useful as probes to detect, isolate or identify other such sequences in samples. The present sequence represents a fragment of hFIX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genus Chlamydomonas comprising reproductive genetic material comprising a nucleotide sequence capable of expressing chicken type I wetallothionein. Also described is a machod of removing metal from an aqueous medium containing at least one dissolved or suspended metal. The transgenic algae are used for the selective separation of metals, particularly the separation of precious and desirable metals such as gold and uranium, from other metals such as cadmium, zinc and copper. The method can be used to facilitate the selective recovery of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            precious metal; phytochelatin; green algae; Chlamydomonas reinhardtii.

               be used, such as in natural surface water flows, ground water and where water may be introduced. The method is suitable for well-drilling, soil and water remediation arts, mining fields, and industrial engineering. The present sequence represents a Class II metallothionein given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated cDNAs encoding TANGO 244, TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins, useful in the treatment of inflammatory diseases (e.g. idiopathic ulcerative colitis), tumors, renal disorders and liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to cDNAs encoding TANGO 244,
TANGO 246, TANGO 275, TANGO 300 and MANGO 245 proteins.
The nucleic acids, proteins and protein modulators are useful for treating colonic disorders, inflammatory diseases, tumors, renal disorders, liver disorders, lung disorders, autoimmune diseases, allergic diseases, cardiovascular diseases, brain disorders, degenerative diseases placental, pancreatic, skeletal and muscle

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FVIIIa/FIXa or FVIIIa/FXa complex, so can be used to combat or preven blood clotting disorders, e.g. thrombosis (particularly vascular thrombosis or deep vein thrombosis, acute myocardial infarction, restenosis, angina, reclosure, cerebrovascular disease, peripheral arterial occlusive disease, hypercoagulability or pulmonary embolism. They can also be used to prevent the occurrence of blood clotting disorders caused by e.g. grafting surgery, vessel wall potency restoration or sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ouery Match

This internation, number sective protections have accivities passes of activities are:

and cells the genes are expressed in Examples of activities are:

controlled the genes are expressed in Examples of activities are:

controlled the genes are expressed in Examples of activities are:

controlled the genes are expressed in the protective; antiproliferative;

controlled the genes are expressed in the protective; and protective; antibacterial; virucides and polypeptides can be used to controlled. The polymorleotides and polypeptides can be used to controlled the polypeptides of the prevent. The polymorleotides and polypeptides can be used to callowascular abbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include catterimmune diseases, hyperproliferative disorders, nervous system disorders, infections caused by bacteria, viruses and fungi and ocular calsorders. Infections caused by bacteria, viruses and fungi and ocular calsorders and so be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of confirmance of polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAC79790 to AAC79798 and increase or decrease storage capabilities. AAC79790 to the present

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by eacnes. The disorders include SAPHO syndrome (synovitis, acne, pustubosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention of polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to convergulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes proteins by acnes infections. The antibodies may also be used as clayme linked immunosorbent assay (ELISA).

Specification, but was obtained in electronic format directly from WIPO polyperic and patent directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for

ABN15762 to ABN27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorthage, osteoarthritis, neurodegenerative disorders, disorders, related to organ
